Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 – Submit Learning Problem	Stage 2 – View AI Analysis	Stage 3 – Review Previous Sessions & Analytics
Actions (What does the customer do?)	• Opens the application. • Selects the subject. • Enters the learning problem. • Clicks Get AI Learning Help.	• Views emotion analysis. • Checks BiLSTM prediction. • Checks BERT prediction. • Reads AI-generated learning guidance.	• Reviews previous interactions. • Views analytics dashboard. • Downloads interaction history if required.
Touchpoint (What part of the service do they interact with?)	• Streamlit Web Interface. • Subject Selection. • Problem Text Area. • Action Buttons.	• Emotion Analysis Section. • BiLSTM Probability Chart. • BERT Prediction Table. • AI Learning Support Section.	• Previous Interaction History. • Analytics Dashboard. • Plotly Charts. • Download Interaction History Button.
Customer Thought (What is the customer thinking?)	• "I hope this helps me understand the topic." • "Let me describe my problem clearly." • "I need quick guidance."	• "The emotion prediction matches my situation." • "The explanation is easy to understand." • "This recommendation is useful."	• "I can review what I learned earlier." • "The charts show my learning progress." • "I can use these previous responses for revision."
Customer Feeling	• Curious. • Confused.	• Supported. • Motivated.	• Satisfied. • Better organized.

(What is the customer feeling?)	• Hopeful.	• More confident.	• Encouraged to continue learning.
Process Ownership (Who is in the lead on this?)	Student, Streamlit Interface	BiLSTM Model, BERT Model, Google Gemini API	Interaction History Module, Analytics Dashboard
Opportunities (How can we improve this stage?)	• Better input validation. • Support longer learning queries. • Improve UI responsiveness.	• Improve prediction accuracy. • Faster AI response generation. • Better visualization of prediction results.	• More detailed analytics. • Enhanced search/filter for previous interactions. • Export reports in additional formats.
